Assessment Change Rationale: In September 2025, following a review of the case, MSCI ESG Research maintained the case Score at 1 (Orange Flag). This Maintain status follows a targeted search yielding no new information that would warrant a change in the Very Severe, Ongoing, and Indirect assessment of the case.

Cargill, Incorporated (Cargill) has faced criticism from environmental protection groups for trading and processing soy, allegedly linked to deforestation in protected areas of Brazil and Bolivia. The company has also faced a legal complaint in the U.S. for its alleged failure to eliminate deforestation from its supply chain.

LATEST CASE DEVELOPMENTS

In February 2025, Reporter Brasil criticized Cargill for allegedly failing to follow the rules established under the Soy Moratorium, which the company had previously committed to. Instead of banning trade in soy grown on lands deforested in the Amazon biome after 2008, the company reportedly shifted the cutoff year to 2020, which was the limit set by the European Union Deforestation Regulation. The article alleged that using the 2008 benchmark, Cargill claimed that 94% of its soy was deforestation-free, while under the 2020 benchmark, this figure rose to 99.3%.

BACKGROUND (FROM LEAST TO MOST RECENT)

In February 2017, Mighty Earth published a report entitled "The Ultimate Mystery Meat," wherein it highlighted the alleged role of several companies in the deforestation of forests in Brazil and Bolivia due to their sourcing of soy. The report criticized Cargill for financing infrastructure projects that allegedly contributed to deforestation and for setting weak deforestation targets. Additionally, Mighty Earth claimed that the area where Cargill operated a commercial silo in Brazil's Cerrado region appeared to have experienced 1,300 square kilometers of deforestation between 2011 and 2015.

In January 2018, Mighty Earth announced that 61 companies had signed the Cerrado Manifesto, a pledge to eliminate deforestation for large-scale agriculture in the Cerrado. The manifesto called on Cargill to extend its deforestation-free commitments from the Amazon to the Cerrado and other areas in Latin America.

In May 2018, several grain traders, including Cargill, were fined a total of BRL 105.7 million (approximately USD 28.8 million) by IBAMA. The agency stated that the penalty was due to the companies' connection to alleged illegal deforestation in the country.

In August 2018, Mongabay alleged that soy producers in Brazil's Cerrado and Bolivia's Gran Chaco continued to deforest the regions. The NGO further claimed that the soy grown in these areas was purchased by traders such as Cargill.

In June 2019, Mighty Earth published a report on deforestation caused by soy and beef production. The report alleged that Cargill was one of the main soy buyers in four locations within the Amazon and the Cerrado.

In July 2019, The New York Times reported that Mighty Earth released a report entitled "Cargill: The Worst Company in the World." The report criticized Cargill for allegedly failing to meet anti-deforestation goals related to its sourcing of soy and for refusing to implement a moratorium on purchasing soy grown on deforested lands in Brazil's Cerrado region.

In November 2020, The Guardian indicated that a joint report it prepared along with other agencies revealed that Cargill had allegedly been linked to the destruction of forests in the Cerrado region through its sourcing of soy. The commodity is then used to feed chicken supplied to supermarkets and fast food chains in the U.K. The report further alleged that Cargill failed to take sufficient measures to prevent deforestation in its supply chain.

In January 2022, The Guardian alleged that Cargill, a feed supplier to farm animals in the U.K., continued to source soy from a farm allegedly linked to deforestation in the Brazilian Amazon. These findings reportedly contrasted Cargill's commitment to not purchase soy from deforested lands in the Amazon after 2008.

In July 2022, Mighty Earth published a report on its investigation into the deforestation of Brazil's Cerrado and its links to soy cultivation and purchasing by traders. In particular, Cargill was linked to eight farms that were allegedly responsible for 247 square kilometers of illegal deforestation since August 2020.

In May 2023, the environmental law organization ClientEarth filed a complaint against Cargill over allegations that the company failed to conduct due diligence in its soy supply chain.

In September 2023, Global Witness published the findings of its investigation into soy grown in Bolivia. The NGO alleged that Cargill failed to trace the origins of its soy supplies in Bolivia, which meant that the company could not guarantee that its purchases were deforestation-free. The report further estimated that the soy the company purchased may have come from farms linked to 200 square kilometers of deforestation in Bolivia's Chiquitano forest.

In November 2023, Mongabay reported that Cargill announced that it had committed to having its supply chains in Brazil, Uruguay, and Argentina be deforestation- and land-conversion-free by 2025. In response, Mighty Earth criticized the company for its alleged failure to include other countries such as Bolivia, Paraguay, and Colombia in the commitment.

In March 2024, Mighty Earth published its second rapid response report on deforestation caused by soy cultivation in Brazil. The report connected Cargill to two suppliers that were allegedly linked to deforestation in both the Amazon and the Cerrado regions. Specifically, the NGO claimed that one Cargill supplier had received several environmental fines from Brazil's environmental agency, IBAMA, for alleged illegal clearing of native vegetation. According to the report, the supplier was allegedly responsible for 21.3 square kilometers of deforestation in the Amazon between January 2020 and December 2023. In the same month, Reporter Brasil alleged that deforestation persisted in Cargill's supply chain despite the company's no-deforestation commitments.

In October 2024, Mighty Earth published a report in partnership with AGTivist. The report alleged a link between Cargill and the illegal deforestation of 64.41 square kilometers of Brazil's Cerrado. Cargill, in turn, reportedly exported soy to a poultry meat producer that supplied supermarkets and fast food chains.

In December 2024, Mighty Earth alleged that Cargill was one of two soy traders in the U.S. linked to the bulk of deforestation in Brazilian biomes. The NGO specifically alleged that Cargill was "likely linked" to over 1,332.56 square kilometers of deforestation, of which 85% occurred in the Cerrado region.

Cargill, Incorporated (Cargill) has faced criticism from environmental protection groups for sourcing palm oil allegedly linked to deforestation in Indonesia, Malaysia, Mexico and Papua New Guinea.

LATEST CASE DEVELOPMENTS

In June 2024, the NGO Friends of the Earth US (FoE), WALHI, and Milieudefensie released a report entitled "Cultivating Conflict: How Astra Agro Lestari, Brands, and Big Finance Capitalize on Indonesia's Governance Gaps." The report broadly alleged that the Indonesian palm oil company Astro Agro Lestari (AAL) had been involved in multiple environmental violations in Central and West Sulawesi, Indonesia. The expansion of AAL's palm oil operations had reportedly resulted in deforestation and other environmental concerns. FoE alleged that at least 11 square kilometers of AAL's plantation were illegally located in Indonesia's forest estate. The report further alleged that palm oil traders, including Cargill, continued to purchase palm oil from AAL.

In May 2025, the Business & Human Rights Resource Centre reached out to the companies mentioned in June 2024 "Cultivating Conflict" report. The organization indicated that it did not receive a response from Cargill.

BACKGROUND (FROM LEAST TO MOST RECENT)

In July 2019, the NGO Mighty Earth released a report criticizing Cargill for its alleged ongoing failure to responsibly source palm oil, which reportedly came from rainforests that had been burned down.

In May 2020, Mighty Earth reported that several companies, including Cargill, had suspended Samling Group, a Malaysian palm oil company, from its supply chains. This suspension followed allegations that 8.86 square kilometers of deforestation between September 2018 and March 2020 were linked to this palm oil company.

In June 2020, the NGO Rainforest Action Network reported that the palm oil company PT Kallista Alam (PT KA) continued operating in Sumatra, despite the Indonesian government's imposition of a USD 26 million penalty on the company for allegedly illegally burning at least 10 square kilometers of the Leuser Ecosystem in 2012. RAN claimed that PT KA's harvests were reportedly supplied to companies such as Cargill.

In October 2021, a report by Global Witness alleged that Cargill and other companies sourced palm oil from companies linked to adverse environmental impacts in Papua New Guinea. In particular, the report estimated that approximately 246 square kilometers of forest had allegedly been impacted between 2011 and 2019 by a Malaysian-owned company operating in Papua New Guinea. The report suggested that Cargill was linked to this company's mill through its supply chain.

In March 2022, the NGO Chain Reaction Research (CRR) linked Cargill to one oil palm plantation allegedly responsible for 24.5 square kilometers of deforestation in Indonesia between 2020 and 2021. In the same month, FoE published a report entitled "No Consent- Astra Agro Lestari's land grab in Central and West Sulawesi, Indonesia." FoE alleged that AAL, through its subsidiaries, was involved in illegal deforestation, forest encroachment, and land conflicts with local communities. Several palm oil traders, including Cargill, reportedly sourced from AAL and its subsidiaries.

In a September 2022 report entitled "Carbon Bomb Scandals: Big Brands Driving Climate Disaster for Palm Oil," RAN identified 10 palm oil traders and processors, including Cargill, that allegedly contributed to the deforestation of the Rawa Singkil Wildlife Reserve in Indonesia through the sourcing of illegal palm oil.

* For symbols and terms used in this report, refer to the "Glossary of Symbols and Terms" section.

CARGILL, INCORPORATED

In June 2023, Mongabay reported that a study conducted by the University of Greifswald in Germany, in collaboration with the Center for Studies of Change in the Mexican Countryside and the civil organization Mexico via Berlin, alleged that the expansion of palm oil cultivation between 2014 and 2019 resulted in the loss of forests and jungles in Mexico. Palm oil grown in these areas was allegedly sold to several companies, including Cargill.

Severe Cases:

Cote d'Ivoire and Ghana: Criticism by environmental protection groups over cocoa sourcing allegedly linked to deforestation

Last Reviewed Date: September 03, 2025 **Case Initiated Date:** September 27, 2017 **Last Case Score Change Date:** September 03, 2025

* For symbols and terms used in this report, refer to the "Glossary of Symbols and Terms" section.

Case Assessment	Score: 2 Flag: 	Global Norms and Conventions	
Severity: Severe	Role: Indirect Involvement	UN Guiding Principles	Pass
<i>Scale of Impact:</i> Extremely Widespread	Status: Ongoing	ILO Alignment - Core	Pass
<i>Nature of Harm:</i> Serious		ILO Alignment - Broad	Pass
<i>Exacerbating Circumstance:</i> None		UN Global Compact Alignment	Pass
<i>Extenuating Circumstance:</i> None			

Assessment Change Rationale: In September 2025, following a review of the case related to allegations of deforestation due to cocoa sourcing, MSCI ESG Research maintained the case Score at 2 (Yellow Flag). We assess the case based on an "Extremely Widespread" Scale of Impact where Cargill was identified by the VOICE Network as one of the top traders and processors of cocoa in 2021 and a "Serious" Nature of Harm due to allegations on illegal deforestation in natural forests by environmental protection groups. In addition, the case was reassessed as Ongoing from Partially Concluded as Cargill did not meet the revised case upgrade criteria for Partial Conclusion.

Cargill, Incorporated (Cargill) has faced criticism from environmental protection groups for its sourcing of cocoa, which was allegedly a deforestation risk commodity, particularly in Cote d'Ivoire and Ghana.

LATEST CASE DEVELOPMENTS

In December 2022, VOICE Network, a coalition of trade unions and NGOs focused on sustainable cocoa, published its Cocoa Barometer report. According to the report, among the chocolate traders and processors, Cargill ranked third in the list of companies that utilized the most cocoa in 2021.

BACKGROUND (FROM LEAST TO MOST RECENT)

In September 2017, the NGO Mighty Earth published a report entitled "Chocolate's Dark Secret: How the Cocoa Industry Destroys National Parks." The report traced the links between the cocoa industry in Cote d'Ivoire and Ghana to cocoa traders, including Cargill. According to Mighty Earth's investigation, the expansion of the cocoa industry in the countries allegedly resulted in the illegal deforestation of national parks and protected forests. Deforestation in these areas threatened the habitats of animals such as elephants, pygmy hippos, leopards, and crocodiles.

In November 2017, several companies, including Cargill, committed to ending deforestation for cocoa production in West Africa.

In July 2019, Mighty Earth released a report that criticized Cargill's alleged ongoing failure to responsibly source cocoa. The NGO specifically alleged that Cargill potentially contributed to forest destruction in Cote d'Ivoire and Ghana by converting forests into cocoa farms. This activity allegedly led to a decline in wildlife populations.

In July 2021, Mighty Earth criticized several companies involved in the chocolate industry, including Cargill, for their lack of transparency in their supply chains. In addition, the NGO called for regulation against commodities that cause deforestation, including chocolate.

Sources and Updates:

06 Jun 2025: Cargill Cocoa & Forest Initiative Progress Report 2024. (Cargill, Incorporated)

07 Dec 2022: Cocoa Barometer 2022. (VOICE Network)

20 Jun 2022: Cocoa and Chocolate Sustainability Progress Report 2021. (Cargill, Incorporated)

17 Dec 2021: Cocoa and Chocolate Sustainability Progress Report 2020. (Cargill, Incorporated)

Cargill reported its continued efforts to address issues related to the company's cocoa supply chain. The company stated that it targeted to have zero deforestation in its cocoa supply chain by 2030. In addition, the company reported a 47% status of certified and sustainably sourced cocoa from its supply chain.

19 May 2020: Cocoa & Chocolate 2018-2019 Sustainability Progress Report. (Cargill, Incorporated)

* For symbols and terms used in this report, refer to the "Glossary of Symbols and Terms" section.

Cargill published in its sustainability report its efforts in tackling issues related to the company's cocoa supply chain, including deforestation allegations. The company stated it leveraged the use of several technologies which mapped approximately 72% of its cocoa farmers in the direct supply chain. According to the company, polygon maps of farms and geo-graphic information systems in place would help in the risk assessment and evaluation of deforestation-related impacts in its supply chain.
